## Precision Rifle Grips

### "BEST OUT THERE!"

I just purchased my second Penguin grip. This is the best vertical grip I have used...bar none. I have the MPA vertical grip and it is also a good grip but the AO stands alone and at the top...you won't be disappointed.

— Eric

### "PERFECTION!"

I used this grip for the first time at a PRS club match last weekend. My hand was perfectly in line with the trigger, the shots broke smoother than before, and everything just felt right when using this grip. I didn't realize how much a difference the right grip would make, but this vertical grip made a huge difference in my performance. I shot my best match to date after switching to the APRG!

— Kalista

AR style Grip works on any chassis or AR style precision rifle with an ambidextrous 45°

- Allows direct alignment of index finger.
- Flat grip with a true thumb rest.

Grip geometry allows for unparalleled speed in situating your rifle for improvised shooting positions.

Manufactured in the U.S.A. by military veterans with industrial grade "Nylon 12".

Available in Left or Right Handed versions.

Methodically developed over the last several years by a former 3rd Ranger Battalion special operations soldier with help by several individual Federal Law Enforcement Agents, our unique grip was designed to give Precision Rifle Competitors an edge with quick, repeatable, and ergonomic action on the gun. The grip's design allows for true thumb rest positioning while allowing the index finger to be placed lower and directly in-line with the trigger. This development was critical in reducing shooter fatigue when behind the gun for long periods of time. The palm swell allows for greater control and manipulation of the firearm while the palm shelf allows the shooter to rest their hand to transition instantly if the need arises.
